

The diagram shows four scenarios of H3 and H9 interaction with MARK100 and MARK101. In each scenario, a blue circle represents a protein, and a red line with an 'X' represents an inhibitory interaction. In the top row, H3 inhibits MARK100. In the bottom row, H3 inhibits MARK101. In the right column, H9 inhibits MARK100 and activates MARK101 (indicated by a red line with an 'X' pointing to MARK101).

Title			
MST6M181VS DEMO BOARD			
Size A4	Document Number MST6M181VS		Rev 1.0
Date:	Friday, May 13, 2011	Sheet 5	of 12

SCART1(FULL SCART)

PIN 16 FAST BLANKING(Impedance 75ohm):
 Logical "0"(0V-0.4V) CVBS is displayed.
 Logical "1"(1V-3V) corresponds to blanking active:external RGB may be first displayed.

PIN 08:FUNCTION SWITCHING(Impedance<10K):
 Level 0: 0V-2V TV Broadcast Reproduction
 Level 1A: 4.5V-7V 16:9 is displayed,if the external equipment is designed to display in this aspect ratio.
 Level 1B: 9.5V-12V Peritelevision(external equipment) reproduction.
